

# Taj Dyson

[Personal Website](#) | [tdyson@stanford.edu](mailto:tdyson@stanford.edu) | [github.com/1sadtrombone](https://github.com/1sadtrombone)

## EDUCATION

---

<b>Stanford University</b> <i>PhD, Physics</i>	Sep. 2021 – Jun. 2026
<b>McGill University</b> <i>Bachelor of Science, Honours Physics</i>	Aug. 2018 – May 2021
<b>Dawson College</b> <i>DCS, First Choice Sciences, Honours List</i>	Aug. 2016 – May 2018

## AWARDS

---

<b>NSERC Undergraduate Summer Research Award (USRA)</b>	2020
<b>FRQNT Supplement to the USRA</b>	2020
<b>BLUE Fellowship at McGill's Building 21</b>	2020
<b>McGill Physics Hackathon Winner – Arts &amp; Science</b>	2019
<b>Dawson College ScienceFest Best Poster Winner</b>	2018
<b>Dawson College ScienceFest Hackathon Winner</b>	2018
<b>Governor General's Academic Medal Bronze Level</b>	2016

## PUBLICATIONS

---

(Click to view)

- **T. Dyson** *et al.*, “Radio-Frequency Interference at the McGill Arctic Research Station”
- H. C. Chiang, **T. Dyson** *et al.*, “The Array of Long Baseline Antennas for Taking Radio Observations from the Sub-Antarctic”

## PRESENTATIONS

---

(Click to view)

<b>Radio Frequency Interference at the McGill Arctic Research Station</b> <i>Soup and Science Public Talks, McGill University</i>	Sep. 2020
<b>Emergent Computation</b> <i>Project Presentation, Building 21</i>	Aug. 2020

## RESEARCH EXPERIENCE

---

<b>Graduate Research Assistant – Qubit-Based Sensors</b> <i>SLAC and Stanford University, supervised by Dr. Noah Kurinsky</i> <ul style="list-style-type: none"><li>• Characterized a cutting-edge superconducting travelling wave parametric amplifier (TWPA), finding optimal operating parameters and its noise temperature.</li><li>• Took measurements of a qubit at cryogenic temperatures, verifying its transition between states under an excitation, and the AC Stark shift of the transition frequency.</li><li>• Measured the critical temperature of superconducting samples for use in transition edge sensors.</li><li>• Learned firsthand to operate a dilution refrigerator.</li></ul>	Mar. 2022 – Present
<b>Graduate Research Assistant – Atom Interferometry with MAGIS</b> <i>Stanford University, supervised by Prof. Jason Hogan</i> <ul style="list-style-type: none"><li>• Designed, built, &amp; tested an optical assembly critical to the MAGIS experiment.</li><li>• Set up a magneto-optical trap for manipulating atoms in a vacuum using lasers.</li><li>• Locked many lasers' frequencies using PID feedback with a known frequency comb.</li><li>• Built &amp; aligned a 922 nm (infrared) laser.</li></ul>	Jan. 2022 – Mar. 2022

## Graduate Research Assistant – Axion Haloscope

Sep. 2021 – Dec. 2021

*Stanford University, supervised by Prof. Chao-Lin Kuo*

- Characterized the resonances of a novel prototype haloscope for axion dark matter detection.
- Developed a script for automatically aligning the haloscope based on measurements possible at cryogenic temperatures.
- Trained in modern high-precision metrology techniques for verifying the haloscope's alignment.
- Helped design the cryogenic radio-frequency readout chain for a receiver in the BICEP array.

## Undergraduate Research Assistant – Radio Cosmology Field Work

Sep. 2018 – Jul. 2021

*McGill University, supervised by Prof. Cynthia Chiang*

- Developed and deployed solar and wind power solutions for radio interferometer stations in remote locations such as Uapishka Station and the McGill Arctic Research Station.
- Designed & built electronic devices and wrote C++ Arduino firmware for power control & logging.
- Flagged radio-frequency interference in radio astronomy data using Python.

## Undergraduate Research Assistant – Radio Interferometry Analysis

Sep. 2020 – May. 2021

*McGill University, supervised by Prof. Jonathan Sievers*

- Synchronized independent interferometer antenna clocks using the time delay of a known signal between them.
- Used the Niagara cluster of Compute Canada to run Python.
- Gave a summary talk to peers and faculty.

## BLUE Fellow – Emergence and Complexity

May 2020 – Jul. 2020

*Building 21*

- Independently researched emergence and its relation to the computational capacity of a system.
- Led group discussions about several research topics.
- Wrote computer simulations of cellular automata using Python.

## TEACHING EXPERIENCE

---

### Teaching Assistant

Jan. 2022 – Mar. 2022

*Stanford University*

*Introductory Undergraduate – Mechanics*

- Taught in an active learning classroom.
- Organized and led study sessions and office hours.
- Graded assignments and exams.

### TEAM Undergraduate TA

Jan. 2021 – May 2021

*McGill University*

*Advanced Undergraduate – Data Science and Observational Astrophysics*

- Mentored students through coding labs in an online active learning environment.

### Instructor

Feb. 2017 – Sep. 2017

*Kids Code Jeunesse*

- Taught coding to kids of all ages in several workshops and events, including Scratch, HTML, and Python.

## TECHNICAL SKILLS

---

**Languages:** Python, C, C++ (Arduino), Rust, Java, Lua

**CAD:** SOLIDWORKS

**Manufacturing:** machine shop, 3D printing, Hexagon metrology

## GRADUATE-LEVEL COURSES

---

Quantum Field Theory I *Stanford University*

Cosmology *Stanford University*

Physics of Energy *Stanford University*

Quantum Theory *McGill University*

Electromagnetic Theory *McGill University*

General Relativity *McGill University*

Particle Physics *McGill University*

Advanced Statistical Mechanics *McGill University*

Biophysics *McGill University*
